### **DETAILED ACTION**

This office action is in response to the application's communication filed on 11/11/2009. In virtue of this communication, claims 1, 6 and 8 are amended; claims 5 and 7 are cancelled. Therefore, claims 1-4, 6 and 8 are pending in this office action.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Steven Smith, Attorney Reg. No. 36,684, on 01/14/2010, which was followed by a faxed copy, of the discussed proposed amendments, on 01/15/2010 by the same Attorney.

**Claim 6** (Currently Amended) A method in a user equipment of a telecommunication system for conducting a multimedia broadcast/multicast service (MBMS) session, said method comprising:

transmitting on a predetermined MBMS-uplink channel, a participation request in order to participate in the MBMS session;

receiving MBMS-messages from the telecommunication system;

decoding one or more of the received MBMS-messages utilizing a stored decoding key that is provided by the telecommunication system;

transmitting on said predetermined MBMS- uplink channel, acknowledgement messages for the one or more received MBMS- messages;

receiving an out-of-sequence MBMS message that cannot be initially decoded;

storing the out-of-sequence MBMS-message;

transmitting an acknowledgement message for the out-of-sequence MBMS-message;

receiving from the telecommunication system, a necessary decoding key for decoding the out-of-sequence MBMS-message;

decoding the out-of-sequence MBMS-message utilizing the necessary decoding key; and

transmitting a second acknowledgement message for the out-of-sequence MBMS-message.

**Claim 8** (Currently Amended) user equipment for communicating in a telecommunication system and conducting a multimedia broadcast/multicast service (MBMS) session, said user equipment comprising:

receiving means for receiving MBMS messages and corresponding decoding keys from the telecommunication system;

decoding means for decoding each of the received MBMS-messages utilizing each MBMS-message's corresponding decoding key;

transmitting means for transmitting acknowledgement message for each decoded MBMS-message;

storing means for storing an out-of-sequence MBMS-message that cannot be initially decoded;

wherein the transmitting means is configured to transmit an acknowledgement message for the out-of-sequence MBMS-message, which has not been decoded;

wherein in response to the acknowledgement message for the out-of-sequence MBMS-message, the telecommunication system sends to the user equipment, a necessary decoding key for decoding the out-of-sequence MBMS message;

wherein the decoding means is configured to decode the out-of sequence MBMS-message utilizing the necessary decoding key; and

wherein the transmitting means is configured to transmit a second acknowledgement message for the out-of sequence MBMS-message.

***Allowable Subject Matter***

Claims 1-4, 6 and 8 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: **Kall (US 6957063 B1)** teaches a method for using a service-on-demand in a mobile communication system, wherein the mobile station monitors and request the service by sending a **registration message over a signaling channel**, receives an acknowledgement of the registration, **including decoding keys**, service channels and other related information, starting the reception of the service-on-demand over the first channel in a manner indicated by the registration acknowledgement; **Kim, et al. (US**

**20040053619 A1)** teaches a method for providing an **interactive data service** between a base station and a mobile station in a mobile communication system wherein the base station simultaneously transmits data transmitted from a multimedia supporting server, to one or more mobile stations **over a forward common channel**; and receiving **reverse transmission data over a dedicated channel** by any one mobile station receiving a service through the common channel; **Tiedemann (US 6839336 B2)** teaches a method for acknowledging delivery of a dedicated transmission and a broadcast transmission; **Willekes, et al. (US 20020075824 A1)** teaches a method for transmitting data files **retransmission** of data packets to receivers that do not **acknowledge** the data packet reception; **Palin, et al (US 20050058116 A1)** teaches a method of controlling a multicast transmission wherein a data packet is sent to a plurality of slave devices across an ultra wideband wireless network, **detecting acknowledgements from said devices and retransmitting the data packet to the respective user whose acknowledgement was not detected**. However, the prior art of the record fails to teach or render obvious singly or in combination the method and the apparatus of amended claims 1, 6 and 8; specifically **storing**, by the user equipment, an **out-of-sequence MBMS message, acknowledging and consequently receiving the corresponding decoding code for said out-of-sequence MBMS message, decoding and further acknowledging the successful decoding of said out of sequence MBMS message**.
